
Comparison of Binder and Mixture Characteristics with Respect to Cracking Performance

*Reyhaneh Rahbar-Rastegar
Jo Sias Daniel*

Northeast Asphalt User/Producer Group Meeting
Newark, Delaware
October 20, 2016

Introduction

- Cracking is one of the main types of distresses in asphalt pavements
- Researchers have developed various cracking index parameters to evaluate the cracking potential of asphalt binders and mixtures

Primary Objective:

To compare several common and recently developed asphalt mixture and asphalt binder index parameters to determine if correlations exist with respect to fatigue and thermal cracking.

Materials

- Lebanon
 - ✓ 11 Mixtures (Plant)
 - ✓ Binder type (PG 58-28, PG 52-34)
 - ✓ Two sources for each binder grade
 - ✓ NMAS (12.5 and 19 mm)
 - ✓ Recycled Material (20-30% RAP and RAP/RAS)

- Hooksett
 - ✓ 3 Mixtures (Plant)
 - ✓ Binder type (PG 58-28, PG 64-28)
 - ✓ NMAS (9.5 and 12.5 mm)
 - ✓ Recycled Material (15-25% RAP)

Materials

- Target Air Void (test specimen): $6\% \pm 0.5$
- RAP Binder Grade
 - Westmoreland: PG 81.3-19.3° C
- Tear off Shingles

Mixture NMAS (mm)	%AC Design Total
19.0	4.7- 4.8
12.5	5.3
9.5	5.8- 6.0

Binder Parameters

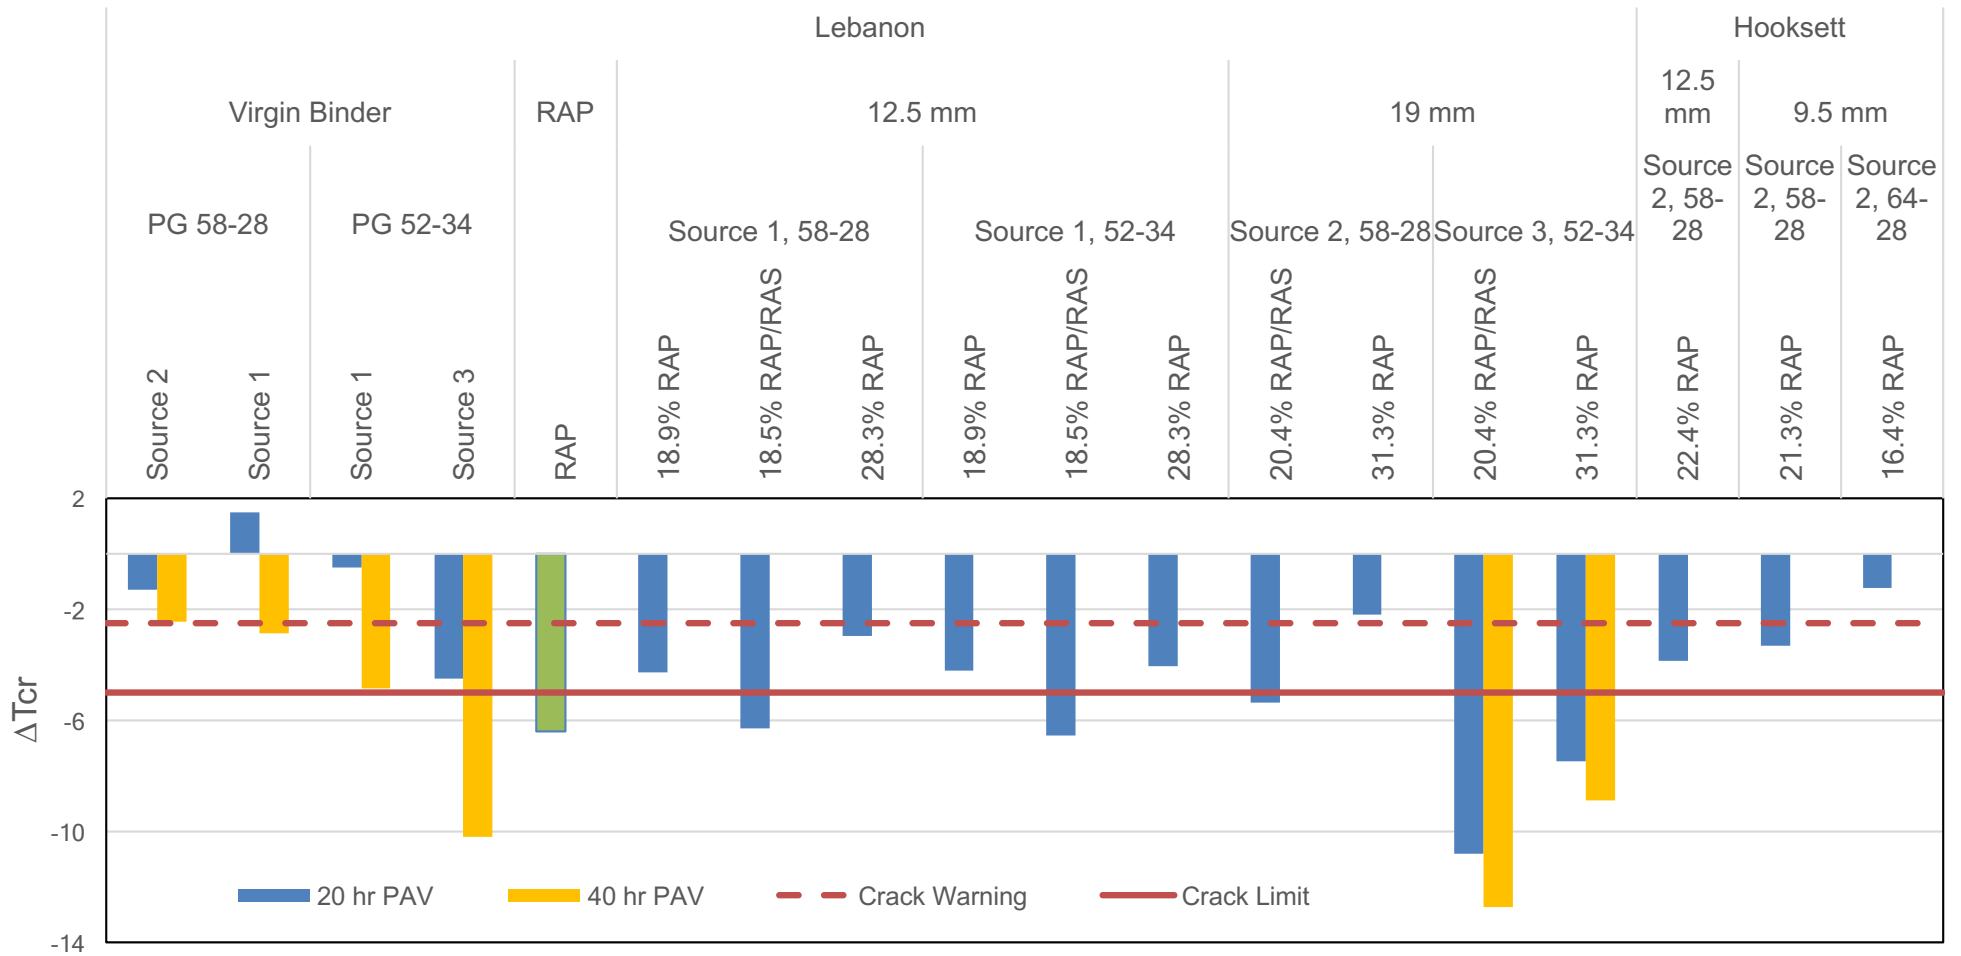

- High and Low Continuous PG Temperatures
- $\Delta T_{cr} = T_{cr}(S=300) - T_{cr}(m=0.300)$
- $|G^*|$ and δ master curves
- Rheological parameters
 - R-value
 - Crossover frequency
 - Glover-Rowe parameter

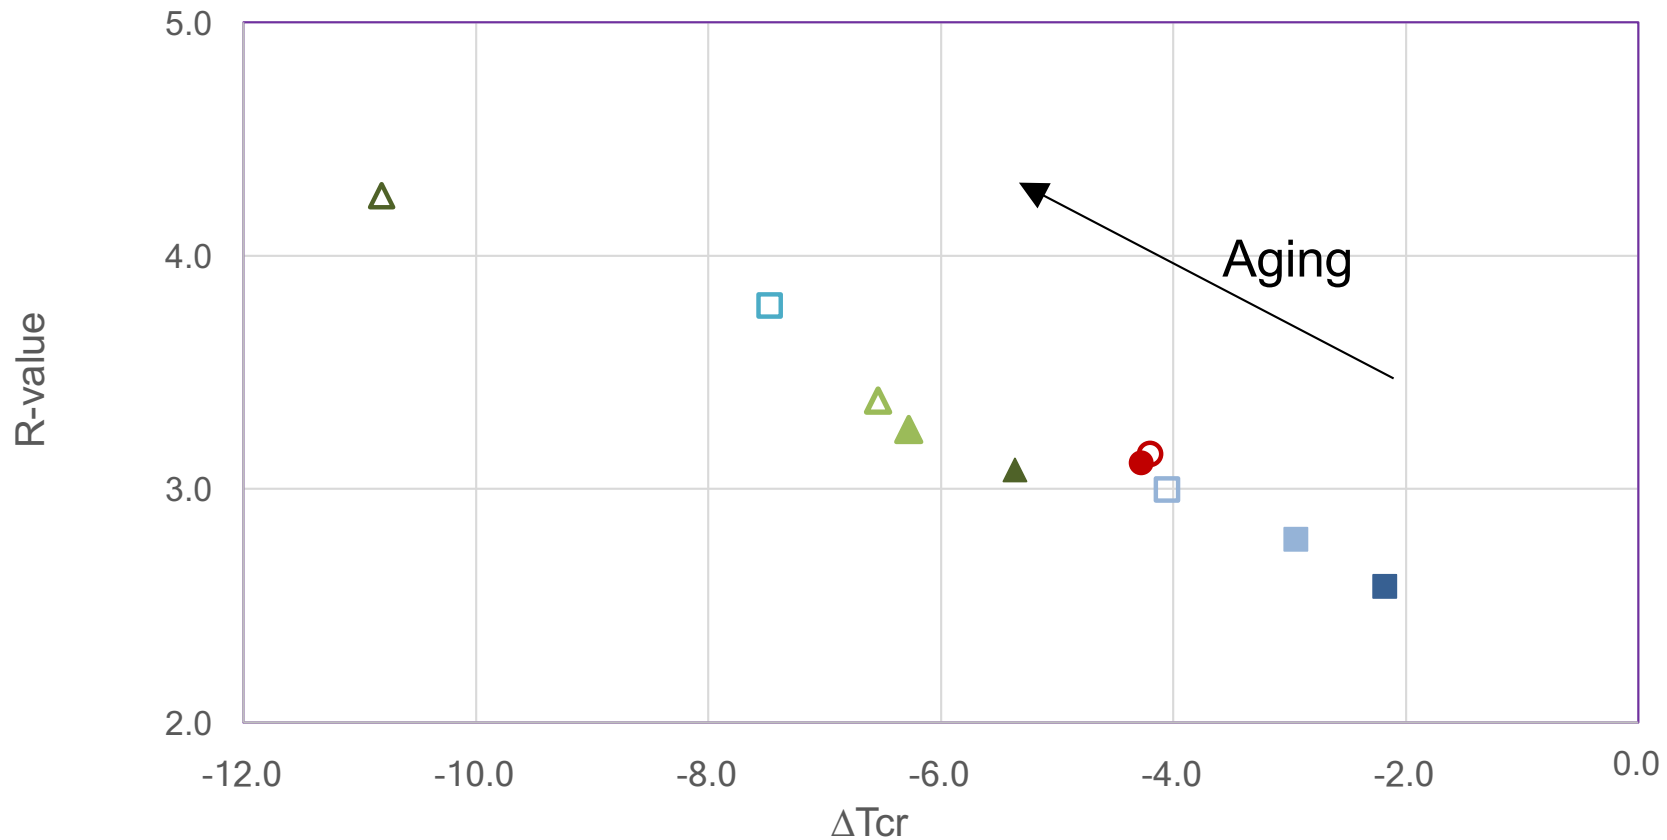

PG Temperatures

$$\Delta T_{cr}$$

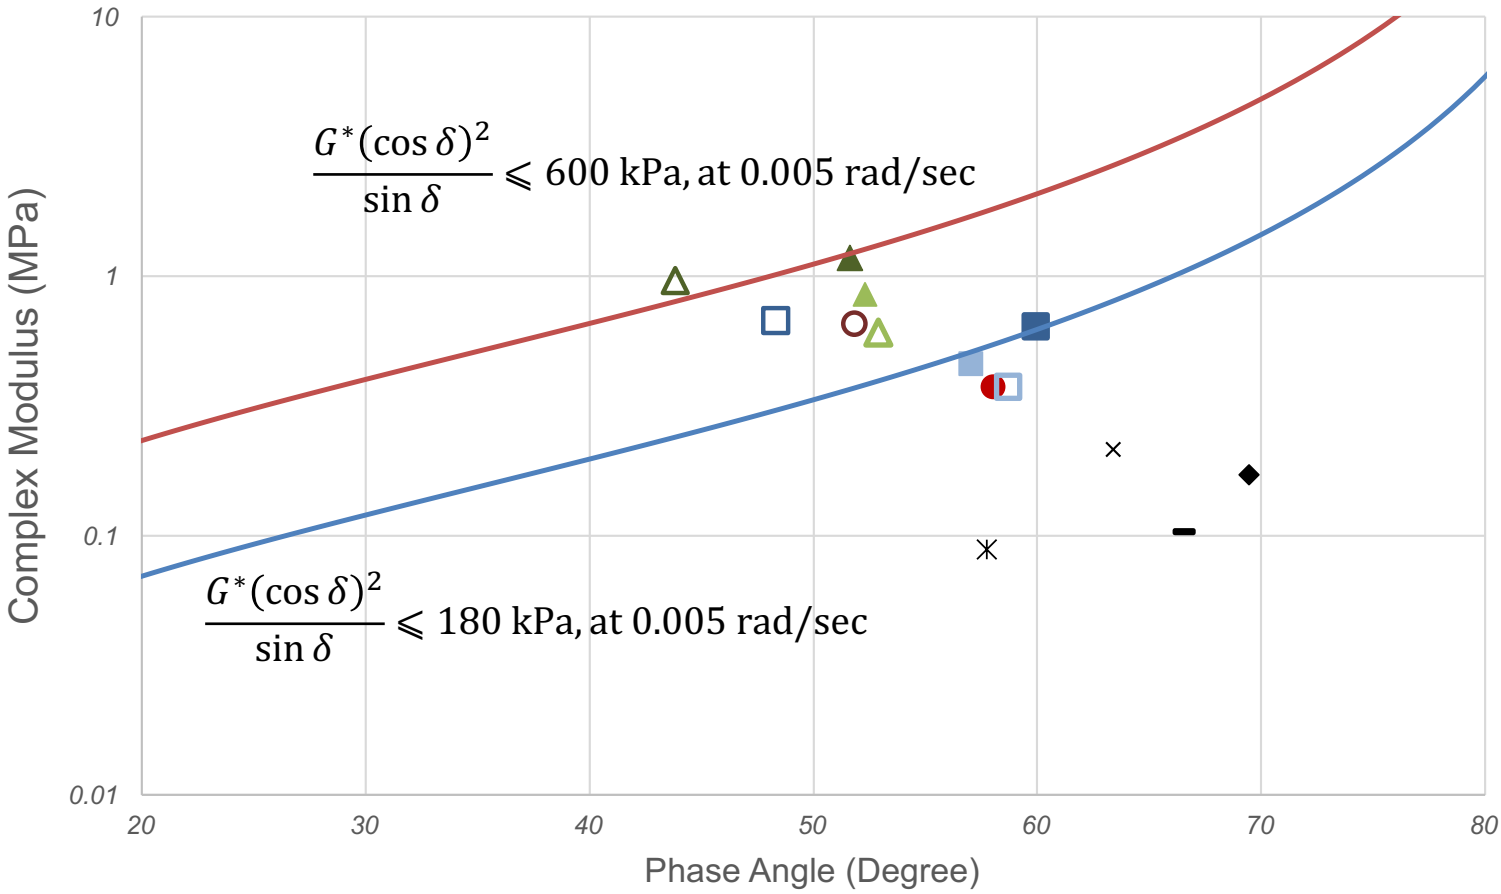

ΔT_{cr} vs R-value

Phase Binder (21° C)	0.13	-0.11	0.65	-0.68	-0.51	-0.37	-0.80	0.80	1.00

Comparison of Binder and Mixture Parameters

Category	Comparison	Pearson Correlation Coefficient	
		Parameter Values	Parameter Rankings
Stiffness	G* at 0C vs E* at 4.4C	0.64	0.59
	G* at 25C vs E* at 21.1 C	0.85	0.78
Relaxation	Phase Angle (0 C binder vs 4.4 C mixture)	0.36	0.58
	Phase Angle (25 C binder vs 21.1 C mixture)	0.38	0.22
Aging	G-R vs mixed-based G-R	-0.22	-0.26
	R value vs Gamma	0.59	0.47
Low Temp. Cracking	ΔT_{cr} vs DCT Flex Index	0.41	0.07
Fatigue Cracking	G-R vs $N_f @ G^R=100$	0.08	0.16
	G-R vs LVECD	-	0.36
	ΔT_{cr} vs $N_f @ G^R=100$	-0.34	-0.26
	ΔT_{cr} vs LVECD	-	0.12

Conclusions

- Very good to good correlations between binder index parameters
- The strongest correlation is between R value and ΔT_{cr}
- The mixture factors did not show strong correlation with each other
- Binder and mixture stiffness are strongly correlated, as expected
- Short-term cracking behavior of mixtures may not be accurately predicted only by rheological parameters of the binder

Future work

- The actual field cracking performance of mixtures needs to be incorporated in the analysis
- Testing on long term aged mixtures is needed to conduct a better comparison
- Additional statistical analysis may help to identify stronger mixture and binder relationships

92nd AAPT Annual Meeting and Technical Sessions

The 2017 Annual Meeting will be held March 19-22, 2017

The Island Hotel, Newport Beach, California USA

2017 Annual Meeting

The Annual Business Meeting and Technical Sessions of the Association of Asphalt Paving Technologists (AAPT) will be March 19-22, 2017 in Newport Beach, California at The Island Hotel (www.islandhotel.com). The annual meeting includes asphalt-related technical sessions comprised of peer-reviewed papers, and invited presentations on specific topics in the Leading Edge Workshop, AAPT-ISAP International Forum, and Symposium. Please see the Annual Meeting page (<http://asphalttechnology.org/annual-meeting.html>) for more details as they become available.

Important dates

August 15, 2016 - deadline for submitting papers (**CLOSED**)

October 10, 2016 - peer reviews completed

November 4, 2016 - notification of paper acceptance

December 2016 – Annual Meeting registration opens

March 19 to 22, 2017 - Annual Business Meeting and Technical Sessions

AAPT Office:
6776 Lake Drive, Suite 215
Lino Lakes, MN 55014
Phone: 651-293-9188
Fax: 651-293-9193 or Email: aapt@aapt.comcastbiz.net
