

NAPA and APA Update

Advancing the Asphalt Pavement Industry

Amy Miller, P.E. National Director, APA Vice President Member and Industry Alliances, NAPA

> Northeast Asphalt User Producer Group November 2, 2022 – Albany, NY

About the National Asphalt Pavement Association...

- Our Vision: Asphalt pavements' quality and value pave the way for enhanced mobility and a sustainable transportation network.
- Our Mission: The National Asphalt Pavement Association works to <u>advocate</u>, <u>advance</u>, and <u>support</u> the asphalt pavement industry.

Industry Values NAPA Strategies

Advancing Asphalt Pavements

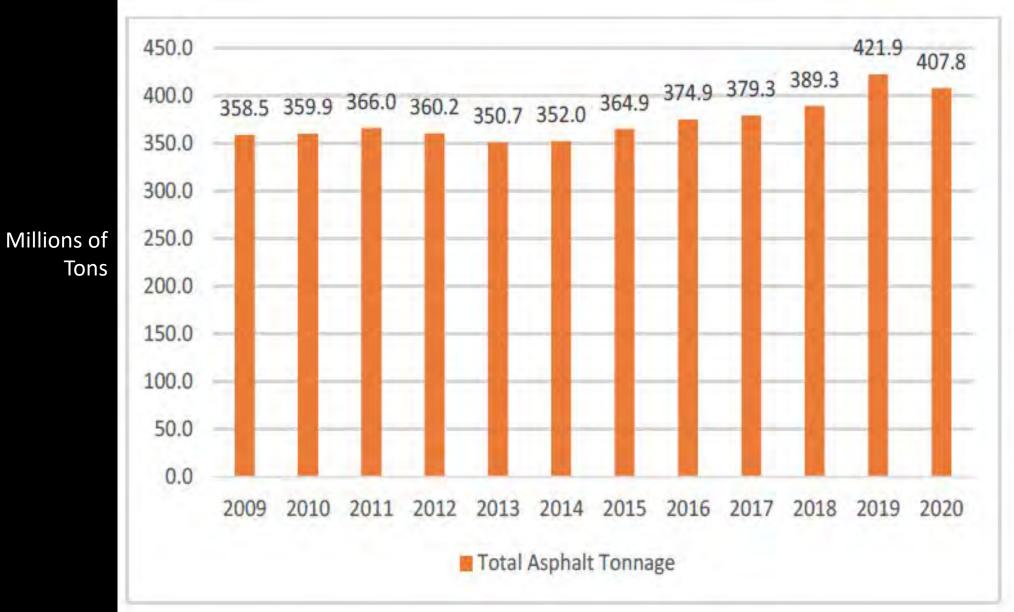

- **OUR INDUSTRY**: Longevity & Growth
- OUR PRODUCT: Quality & Innovation, Sustainable
- OUR NATION: Highways Investment, & Smart Regulations

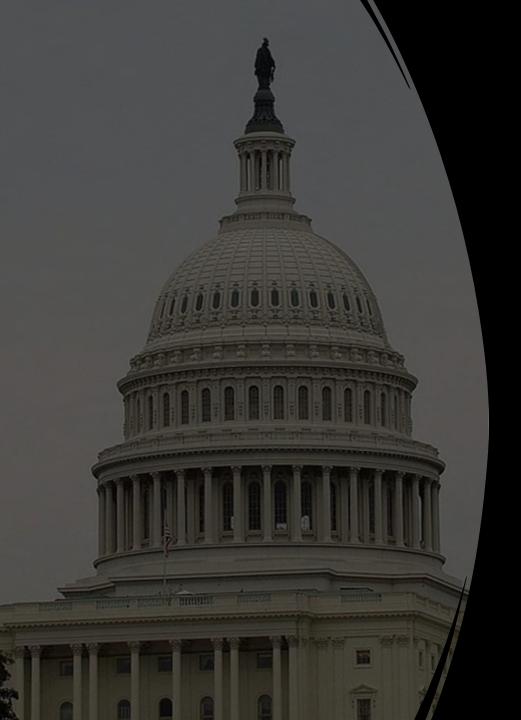

• OUR PEOPLE & ENVIRONMENT:

- Health & Safety, Environment
- Workforce: Recruit & Retain
- THE POWER OF MANY: Engagement for Advancement

Asphalt Tonnage Produced in the U.S., by year

Changing Landscape

- Infrastructure Investment and Jobs Act (IIJA) or Bipartisan Infrastructure Law (BIL)
- General Services Administration
- Inflation Reduction Act (IRA)
- Federal & State Buy Clean Actions

An Industry-Wide Vision

A Vision for Net Zero Carbon Emissions for the Asphalt Pavement Industry

NATIONAL ASPHALT PAVEMENT ASSOCIATION

AsphaltPavement.org/Forward

Industry Goals & Gaps

Net Zero Production and Construction

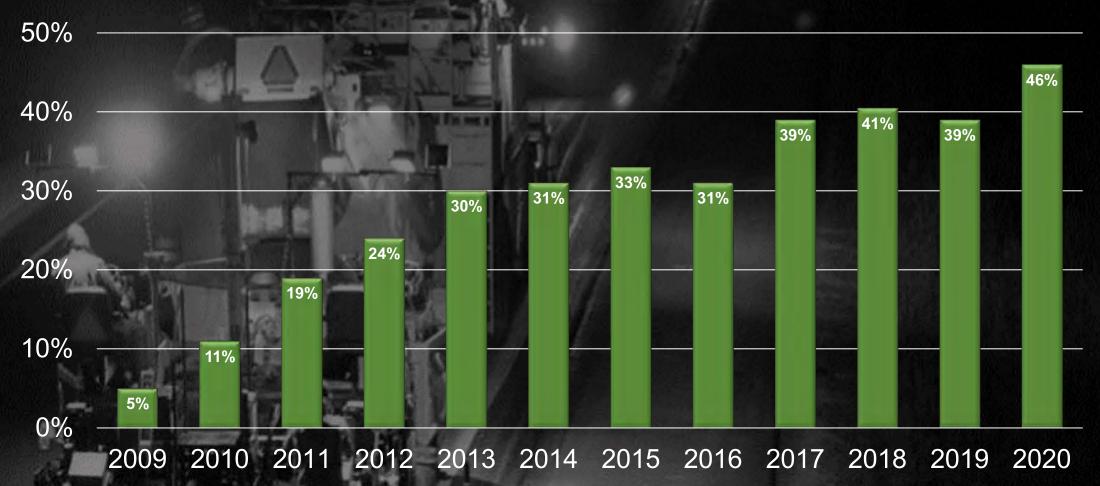

- Key drivers for emissions during production and construction
- Alternative and renewable fuels
- Align policies, procedures, and specs
- WMA technology
- Advanced logistical technologies
- Best practices
- Capital investments

Industry Goal 1 Scope 1 Emissions

Achieve net zero carbon emissions during asphalt production and construction by 2050.

Warm Mix Asphalt (WMA) Technologies Percentage of Total Asphalt Production in the U.S.

RESEARCH & IMPLEMENTATION GAPS

- Research technologies that would allow a 50% reduction in energy and associated emissions required to produce asphalt mixtures.
 - WARM MIX & HALF WARM MIX
 - COLD CENTRAL PLANT RECYCLING
 - BIOFUELS

Pavement Quality, Durability, and Use

- Alternative construction scheduling
- Perpetual pavements
- Rolling resistance
- Contract incentives for improved quality and improved vehicle fuel economy

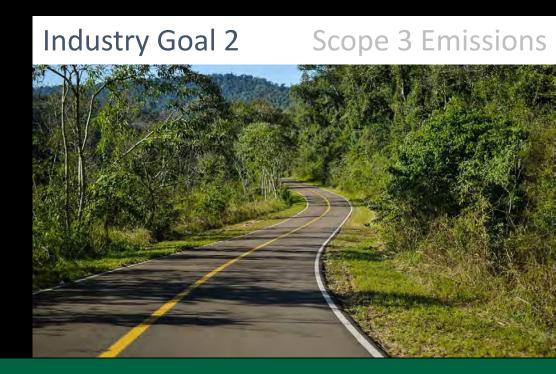

Industry Goal 2 Scope 3 Emissions

Partner with customers to reduce emissions through pavement quality, durability, longevity, and efficiency standards by 2050

RESEARCH & IMPLEMENTATION GAPS

- Develop a framework for owners to optimize pavement maintenance to reduce vehicular emissions by maintaining pavement smoothness.
- Rolling resistance
 - Structural Response Models
- Alternative Scheduling
 - User Delay Impacts

Net Zero Materials Supply Chain

- More recycled material
- Balanced Mix Design
- Industry summits
- New technology and materials

"We are America's No. 1 most recycled product," NAPA's Jay Hansen told *The New York Times*.

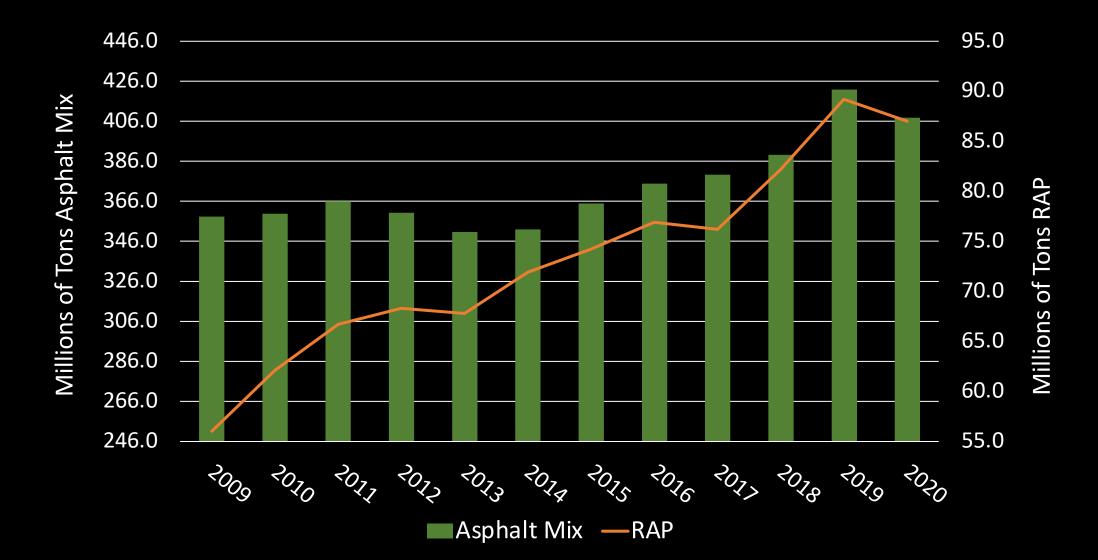

Industry Goal 3 Scope 3 Emissions

Develop a net zero materials supply chain by 2050

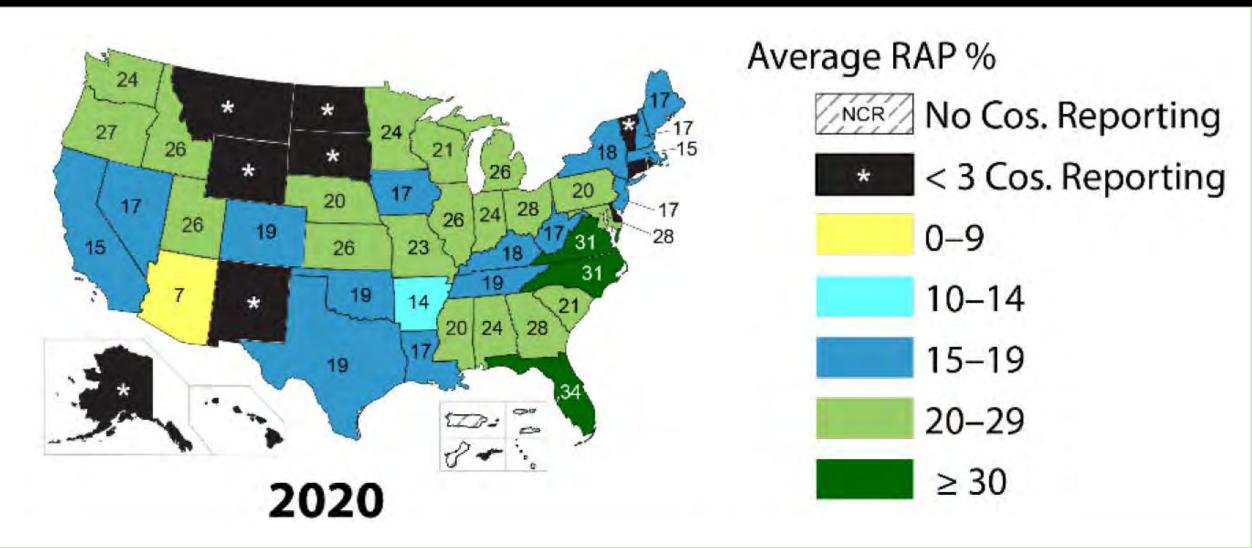

Asphalt Mix and RAP Tonnage

Total Production and Use in the U.S.

% RAP Used by State 2020 Map

RESEARCH & IMPLEMENTATION GAPS

- New forms of asphalt binder and/or binder replacements
- Rapid assessment of new materials
- Education on use and acceptance of performance tests used in BMD leading to specification development that encourage innovation
- Research allowing industry to increase RAP content to greater than 40%

- **OUR PRODUCT**: Quality & Innovation
- THE POWER OF MANY: Engagement for Advancement

MISSION:

As a trusted resource, the Alliance establishes asphalt as the pavement of choice by detailing proven advantages of asphalt pavement in the areas of safety, value, performance, and the environment.

OUR INDUSTRY: Longevity & Growth

- Engage and educate stakeholders, such as pavement owners and policy makers, to advance asphalt as the pavement of choice for mobility solutions.
- Extensive resources and efforts among 42 Associations
- A trusted resource for asphalt knowledge and solutions.

A Unified Industry – a Trusted Partner

Pavement Design Learning Opportunities

EXPERIENCES & BEST PRACTICES September 27 OF LOCAL ROAD OWNERS 2:00-3:30 p.m. EDT

This webinar is almed at helping local decision makers, pavement managers, and pavement engineers understand the short and long-term benefits asphalt pavement provides. Attendees will hear first-hand experiences from municipalities as they discuss best practices in owning and maintaining their road systems.

Guest Speakers:

Dennis Bonds Uny of Yupela, MS ColV Engineer Judge Gary Moore Brane Dourty, KY Judge: Executive Dan Roberts Department of Public Verse Engineering, Douglas County, 60 Manager of Englaneering Perinto & Instruction

Learn about best practices in local

design, materials, and construction

Hear first-hand from municipalities

FREE Webinar August 25/2:00 PM EDT

This webinar will discuss material selection and mixture design to optimize Perpetual Pavement performance, discuss current perpetual design practices, and present best practices for construction of high quality, high performance pavements.

PARTICIPANTS WILL:

Learn the chief advantages of Perpetual Pavements

Designing a Perpetual Pavement

- Be able to describe the functions of the various material layers in Perpetual Pavements
- Understand the principle design features of Perpetual Pavements

David E. Newcomb, P.E., Ph.D. Consultant

Pavement Design Perpetual Pavement Design

Perpetual Pavement Cross-Section

This webinar will introduce traditional and conversion Perpetual Pavement design concepts, with emphasis on the development of the design and application using **PerRoad** and **PAVEXpress**. Real world case studies will be presented.

PARTICIPANTS WILL:

Learn the fundamental concepts needed to convert an existing pavement into a Perpetual Pavement

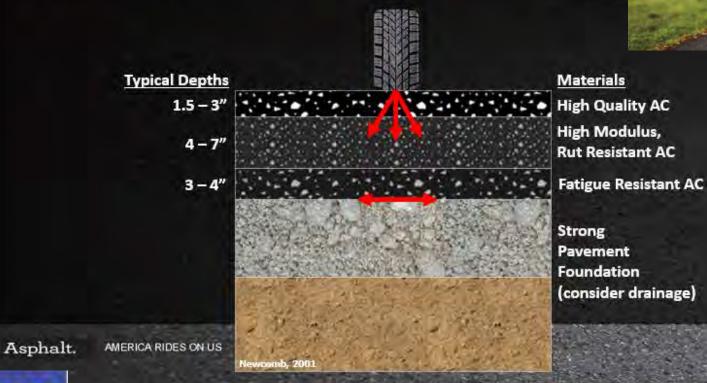

Perpetual Pavements by Conversion

Understand how **PerRoad** and **PAVEXpress** can be used to facilitate Perpetual Pavement design by conversion

See real-world examples of converted Perpetual Pavements

Speaker Dave Timm, Ph.D. Brasfield & Gorrie Professor of Civil & Environmental Engineering at Auburn University

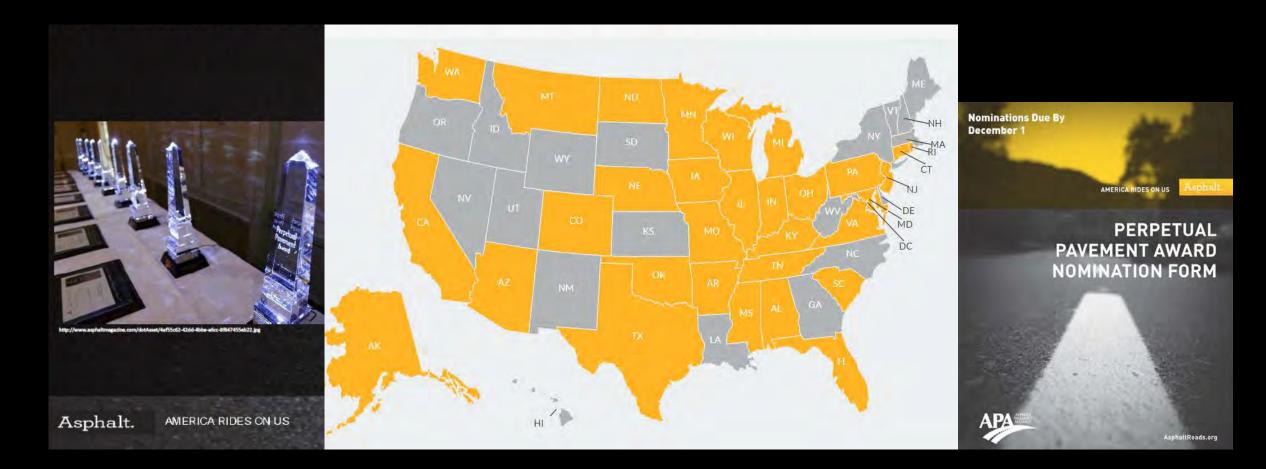

Perpetual Pavement Awards

This new Perpetual Pavement Award (PPA) celebrates long-life asphalt pavements that reflect the characteristics expected from Perpetual Pavements: excellence in design, quality in construction, and value to taxpayers.

Two New Awards Began in 2021!

Perpetual Pavement Award Winners

Oldest award winner to date: 91 years old in Ohio when awarded

Pavement Smoothness

Specifying Smoothness for Cost Savings

When asked, highway agency leaders report that their No. 1 challenge is funding

(Edelman Berland, 2013). As federal funding for infrastructure investment continues to remain inadequate compared to the need, many agencies are looking to prioritize pavement performance, life-cycle cost analysis (LCCA), and pavement durability in their decision-making processes. Simply put, agencies want to ensure they get the most pavement life possible from each precious dollar of public money.

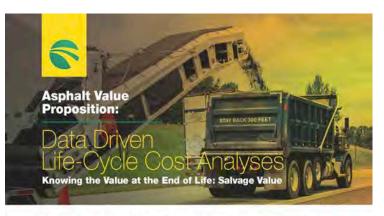

One data point commonly used to measure performance for both asphalt and concrete. pavements is smoothness. Smoother pavements provide a quieter, more comfortable ride for drivers, and smoothness is a key factor in ensuring road user satisfaction (FHWA, 2002). Research has consistently cc engineers and state highway shown that pavement smoothness has a significant influence on vehicle fuel economy for trucks and passenger cars (Willis et al., 2015), yielding as much as a 4.5% improvement in fuel economy (Sime et al., 2000). Beyond improved vehicle fuel economy. pavements that are smoother from the start require less maintenance, saving road owners \$1,295 annually for every lane-mile resurfaced (McGhee & Gillespie, 2006). One reason asphalt is the pavement of choice for engineers is the level of smoothness it provides. In fact, nearly 80 percent of pavement engineers and state highway agency officials say that

asphalt provides the smoothest pavement (Edelman Berland, 2013), Building high-quality smooth asphalt pavements positively impacts the bottom lines of both transportation agencies and the driving public.

Nearly 70% of state agencies' LCCA processes reportedly do not account for the use of materials or practices that increase pavement service life (SAPA, 2019). However, the Virginia Department of Transportation (VDOT) has studied the economic advantages of specifying and constructing smoother pavements (McGhee & Gillespie, 2006) and used the data gained to validate maintenance and rehabilitation cycles to account for the impact of smoothness on service life and vehicle operations.

Nearly 80 percent of pavement agency officials say that asphalt provides the smoothest pavement.

In 1996, VDOT implemented the Special Provision for Rideability to incentivize the construction of smoother asphalt pavements. Projects in the incentive program showed an average increase in material cost of \$1.03 per ton of asphalt mixture. However, VDOT observed that these pavements were on average 8.9 in/mile smoother at initial construction. Over time. this increase in initial smoothness equates to an increase of seven years of functional life compared

"Life-cycle cost analysis (LCCA) is an evaluation technique applicable for the consideration of certain transportation decisions" (FHWA, 2002). This process includes the calculation of upfront development, capital and financing costs, discounted operating and maintenance costs, and end-of-life costs or the value associated with a specific asset or project (ASCE, 2014). To provide a reliable analysis of life-cycle costs, it is critical to ensure the right data and inputs are applied. While many states have databases of bid estimates for initial construction costing, the data to accurately estimate pavement maintenance and rehabilitation cycles, salvage value benefits, and end-of-life costs are more difficult to ascertain.

Recent guidance has been developed to aid roadway owners in applying a data-driven process to determine the true value of an asphalt pavement: at the end of its life (Gu & Tran, 2019). It's estimated about one-third of state agencies currently consider the end-of-life of a pavement in their LCCA processes (SAPA, 2019); however, most agencies only look at the remaining service life of the last maintenance treatment not the salvage value (Gu & Tran, 2019) When considering pavement end of life

in LCCA, Federal Highway Administration (FHWA) supports two primary methods for calculating the value: salvage value (or value of materials that can be recycled) and remaining service life (the amount of life left in the pavement structure) (FHWA, 2002). This document will focus on salvage value.

A recent study showed that the material components of (C an asphalt pavement have a salvage value of approximately \$25.10 per ton

When considering salvage value, asphalt mixtures contain two recyclable ingredients: asphalt binder and aggregate. A recent study showed that the material components of an asphalt pavement have a salvage value of approximately \$25.10 per ton, because both the binder and aggregate can be reclaimed to make new asphalt mixtures. Not only can the old aggregate directly replace virgin aggregates, the asphalt binder can be reactivated to replace a portion of virgin binder (Gu & Tran. 2019). Concrete pavements consist primarily of portland cement powder, sand, water, and appregate. Once the cement powder is used, it cannot be reactivated:
